

# Fabricated Wear Plates

## “Drop In” Capability

Wear plate materials provide “Built-In” lubrication. The low static friction eliminates slip stick and can operate wet or dry.

Wear plates are fabricated from lubrication free Rulon® PTFE and CIP laminate composite materials. These materials can be bonded to steel, stainless steel, bronze or aluminum substrates.

Available in finished sizes to customer specifications.

Way materials accept imbedments & prevent wear on mating surface.

Excellent electrical insulation properties.

Noise & vibration dampening.

High load capacity.
